Motorised Sieve Shaker

DESCRIPTION

Motorised Sieve Shakers impart a circular motion to the material being sieved so that it makes a slow progression over the surface of the sieve. The Sieve Shaker is equipped with a dynamic power source which ensures the right vibration is imparted to the sieves and sample for fast, accurate and reproducible tests. The Sieve Shakers are fitted with a very efficient clamping device that ensures sieves are held firmly without over-tightening and allows them to be quickly removed and replaced. The timer can be preset for any duration up to 60 minutes.
