No:16 Ivogsan Yenimahalle - ANKARA / TÜRKİYE

DESCRIPTION

The Concrete Test Hammer (Schmidt Hammer) N Type is designed to determine the strength of concrete in finished structures by the method of elastic rebound.

The indications are determined with the help of nondestructive testing method. The device is made of aluminum, characterized by simple construction, easy use and maintenance.

Purpose of Usage:

Concrete Test Hammer (Schmidt Hammer) N Type is used to measure the compressive strength properties of hardened concrete by a non-destructive method, to determine the general quality of the concrete and the weak points in the concrete. The object to be tested must have a minimum thickness of 100 mm (3.9 inches).

The Advantages:

The high accuracy of the test results and the control of the production process at all stages.

Principle of Operation:

The kick strikes against a hard surface, after which it bounces to a certain height (H) in conventional units of the scale of the device, which is an indirect characteristic of the strength of concrete for compression.

The delivery set includes a calibration table in N / mm² (Mpa), an abrasive, a carrying case.

TECHNICAL SPECIFICATIONS

P.Code	C3290
Impact Energy	2.207J (0.735Nm)
Measured Strength Range	10-70 MPa
Dimensions	Ø85x330 mm
Weight (approx.)	1.4 kg

THANK YOU

FOR CHOOSE US

Dear business partners, thank you very much for believing in us and recommending our products to your customers; We sincerely believe that our company will grow even more thanks to you, our esteemed business partners.

You can reach us than our phones or e mail address 24 hours a day.
